

## Science – Mr Simmons

Hello, my name is Mr Simmons, and I am the Science Lead at Hanwell Fields. I have had a huge interest and passion for Science for as long as I can remember. My earliest memory is rubbing a balloon on my brother's hair and sticking it to the wall and being fascinated that it would stick (but also that I had made my brother's hair static!) I used to love

creating my own experiments when I would get home from school, such as making my own lava lamps, experimenting with different household items and creating rockets in the back garden. I continued my love for Science when growing up and went on to study Human Biology and Physiotherapy at University. For me, Science is an endless topic that can open up so many questions, interests, and passions. From researching into Space, understanding chemical reactions, learning about the human body, discovering more about animal habitats- Science is a whole new world in itself and becomes such an easy topic to get absorbed into.

My favourite Scientist would have to be the man himself, Sir Albert Einstein. He was everything I love about Science. He was crazy, mad, and complete laugh and an absolute genius! Little fact for you... as most of you know, I love Star Wars. Yoda's eyes were modelled on that of Sir Albert Einstein, because they were a perfect example of someone who is wise, knowledgeable and intelligent, yet playful, energetic, and fun. Speaks volumes about him really. He was a legend!
